

EForms

The scope of the EForms project is an implementation of a convenient organisation of gaining, storing and managing the data of the university. The main goal is to provide a simple way of giving a relevant information (participating in the voting) for users and managing it to the administrator.

Getting Started

- 1) Download the *.zip* archive with program.
- 2) Extract files into any directory.
- 3) Run `ewf_app.ecf` with Eiffel Studio.
- 4) Choose `ewf_app` and compile the project.
- 5) Run the project.

Administrator queries

The following queries for an administrator are implemented:

- All participants of the voting
- Cumulative info about a particular unit
- The number of supervised students by each laboratory
